**Subject:** LGAS Compliance Monitoring Frequency (North Sanitary Landfill)

Steve,

In accordance with Section 4.2 of the North Sanitary Landfill Operations and Maintenance Manual, compliance probes located along the Site perimeter have been monitored routinely for a number of years. Additionally, based on a long track record of data, the monitoring frequency was re-evaluated and subsequently modified to a bi-weekly interval consistent with e-mail correspondence between us, dated November 18, 2011.

Now that we have an additional three (3) years of bi-weekly monitoring from the Site, the data supports further refinement of the compliance monitoring frequency. Therefore, we would like to propose that going forward the frequency of compliance monitoring be transitioned from bi-weekly to a monthly event. As always, the results from the monthly monitoring would continue to be provided to EPA as attachments to the Monthly Progress Reports.

Thanks for your consideration in this matter.  
Mike
